### Editorial Review

#### Review

"It is a 'must-have' resource for every scientist dealing with their amazing molecules..." (*Lab Times*, 25th September 2007)

#### From the Back Cover

The first volume of this most comprehensive reference on the development, production and therapeutic application of antibodies contains general chapters presenting established technologies and clinical applications. Volume II goes on to look at emerging technologies, new therapeutic concepts, and clinical studies, while the third volume features detailed and specific information about each currently approved type of antibody, including the clinical data.

Nearly 100 international experts and researchers from academia, industry, and such regulating bodies as the FDA have contributed their knowledge. This includes the latest information on intellectual property issues hardly available elsewhere, as well as detailed data of relevant studies for clinical applications.

A must-have resource for academic researchers, decision makers in industry and healthcare professionals in the clinic.

From the foreword by Mark Glassy, Chairman & Professor, The Rajko Medenica Research Foundation, and Chief Executive Officer, Shantha West, Inc., San Diego, CA, USA:

"After more than a century of intense analysis, antibodies continue to amaze and inspire. This Handbook of Therapeutic Antibodies is not just an assembly of articles but rather a state-of-the-art comprehensive compendium, which will appeal to all those interested in antibodies, whether from academia, industry, or the clinic. It is an unrivalled resource which shows how mature the antibody field has become and how precisely the antibody molecule can be manipulated and utilized."

Stefan Dübel studied biology at the universities of Mainz and Heidelberg, initially concentrating on developmental biology. From 1989 onwards he carried out pioneering work on antibody phage display and antibody libraries with randomised CDRs. Further work focussed on antibody fusion proteins and improvements of antibody phage display. Currently he is Director of the Department of Biotechnology at the Technical University of Braunschweig and coordinator of the 'Antibody Factory' within the German National Genome Research Network. Stefan Dübel has co-authored a number of textbooks, about 90 publications and 15 patents in the field of recombinant antibodies and phage display.

#### About the Author

Stefan Dübel got his PhD at the Center for Molecular Biology Heidelberg (ZMBH) and spent his post-doc at the German Cancer Research Center (DKFZ) with research on the development of antibody display libraries. In the following years, he substantially participated in the invention of recombinant antibody phage display technology, as well as other recombinant antibody technologies and the development of various antibody fusion proteins. In 1996, he moved to the University of Heidelberg to establish the antibody engineering group at the Institute of Molecular Genetics. After holding a group leader position at the University of Heidelberg from 1996, Stefan Dübel went to the Biological Faculty of the Technical University of Braunschweig as a full professor in 2002. Here, he currently serves as head of the Department of Biotechnology in Braunschweig and managing director of the Institute of Biochemistry and Biotechnology. He has co-authored more than 90 scientific papers, 17 patents, as well as two acknowledged textbooks in the

field of recombinant antibodies. He is also board member of scientific journals and the biotech industry.
