## Life Before Life: A Scientific Investigation of Children's Memories of Previous Lives By Jim Tucker M.D.

For the past forty years, doctors at the University of Virginia Medical Center have conducted research into young children's reports of past-life memories. Dr. Ian Stevenson, the founder of this work, has always written for a scientific audience. Now, in this provocative and fascinating book, Dr. Jim B. Tucker, a child psychiatrist who currently directs the research, shares these studies with the general public. *Life Before Life* is a landmark work—one that has the potential to challenge and ultimately change our understandings about life and death. Children who report past-life memories typically begin talking spontaneously about a previous life when they are two to three years old. Some talk about the life of a deceased family member, while others describe the life of a stranger. They may recount details about previous family members, events in the previous life, or the way they died in that life. The children tend to show a strong emotional involvement with the apparent memories and often cry to be taken to the previous family. In many cases, parents have taken their children to the places they named, where they found that an individual had died whose life matched the details given by the child. During the visits, some children have recognized family members or friends from that individual's life. Many children have had birthmarks that matched wounds on the body of the deceased individual.

Researchers have studied more than 2500 such cases, and their careful investigations have produced an impressive body of work. *JAMA*, the Journal of the American Medical Association, stated in a review of one of Dr. Stevenson's scientific books that, "in regard to reincarnation he has painstakingly and unemotionally collected a detailed series of cases . . . in which the evidence is difficult to explain on any other grounds."

*Life Before Life* explores the various features of this world-wide phenomenon, describing numerous cases along the way. We meet a boy in Michigan who, after being born with three birthmarks that matched wounds on his deceased brother, begins talking about events from the brother's life; a boy in Turkey who gives a number of accurate details, including the name, of a man who lived 500 miles away and died fifty years before the boy was born; and a girl in Sri Lanka who is able to recognize the family members of a deceased stranger as they are

presented to her one by one, giving specifics about their lives that she could not have known from their appearance.

Dr. Tucker presents this material in a straightforward way, relating extraordinary stories that have been amassed with a scientific approach. He then considers how best to interpret the evidence, and he lets readers reach their own conclusions—which, for many, will be profound.

### Editorial Review

From [Booklist](#)

Is reincarnation possible? Tucker's book full of real-life evidence and an explanation of how quantum physics allows for it makes one think the better question may be *Is it* impossible? Basing his argument on a study of more than 40 years' duration into the lives, present and past, of more than 2,500 children, psychiatrist Tucker makes a pretty solid case in favor of reincarnation. He opens with the story of William, born five years after his policeman grandfather, John, was killed, with birth defects similar to John's fatal wounds. William was able, at three, to report John's last moments, of which he couldn't possibly have had any knowledge. Then there is the Turkish child who insisted on being called by the name of a man who had lived 50 miles away. Taken to the man's town, the child proceeded to the man's home and identified the man's parents in a roomful of people. All the stories were checked by scientist-interviewers, and all potential deception was eliminated; hence, Tucker introduces powerful grounds for credulous speculation. *Donna Chavez*

### Review

"In this very elegant book, Dr. Tucker offers the most convincing scientific evidence for the fact that our consciousness survives physical death. And indeed, takes quantum leaps of creativity in the form of reincarnation. The model that Dr. Tucker presents opens a new vision of who we are, limitless beings that fill up all of space and time."--Deepak Chopra, author of *Life After Death: The Burden of Proof*

"[A] solid case for reincarnation.... Tucker introduces powerful grounds for credulous speculation."--*Booklist*

"Jim Tucker gives us a clear, concise and eminently rational insight into a 40 year investigation of what is unquestionably the best evidence for the existence of reincarnation. We are lucky to have in him a worthy successor to Ian Stevenson."--TOM SHRODER, author of *Old Souls: Compelling Evidence From Children Who Remember Past Lives*

"Anyone with an open mind, on reading Dr. Jim B. Tucker's *Life Before Life*, will realize that our conventional concepts of life and death are ripe for revision. The possibilities raised by this book for human destiny are as hopeful as the current view is grim. ***Life Before Life* is extraordinarily important.**"--**Larry Dossey, M.D., author of *The Extraordinary Healing Power of Ordinary Things*, *Reinventing Medicine*, and *Healing Words***

"With his training as a pediatric psychiatrist, and the mind of an inquiring scientist, Dr. Jim Tucker takes a fresh look at one of life's most intriguing questions: 'Does consciousness survive death?' Through the hundreds of case studies of his predecessor, Dr. Ian Stevenson, and his own cases, Dr. Tucker adds new insight to this amazing research, and draws us closer to understanding this perennial mystery."--CAROL BOWMAN, author of *Children's Past Li...*
