Living Rainbow H2O By Mae-Wan Ho

This book is a unique synthesis of the latest findings in the quantum physics and chemistry of water that will tell you why it is so remarkably fit for life. It offers a novel panoramic perspective of cell biology based on water as "means, medium, and message" of life.

This book is a sequel to *The Rainbow and The Worm, The Physics of Organisms*, which has remained in a class of its own for nearly 20 years since the publication of the first edition. *Living Rainbow H2O* continues the fascinating journey in the author's quest for the meaning of life, in science and beyond. Like *The Rainbow and The Worm*, the present book will appeal to readers in the arts and humanities as well as scientists; not least because the author herself is an occasional artist and poet. Great care has been taken to explain terms and concepts for the benefit of the general reader. At the same time, sufficient scientific details are provided in text boxes for the advanced reader and researcher without interrupting the main story.

Readership: General public and undergraduate students in cell biology, biophysics, biochemistry and quantum mechanics.

Editorial Review

Review

"This book is a delightful read for laypersons. It surveys some of the outstanding, sometimes considered anomalous properties of water and aqueous solutions. The style is consistently light, as it hops from one topic to another with a seemingly dance-like rhythm to it. Indeed, one finds many dances of water molecules among themselves, as well as with other molecules in living cells ... I recommend this book to anyone who is curious about what goes on in each of our cells, and why water is so vital to our life." -- Arieh Ben-Naim, Hebrew University of Jerusalem, Israel
