Cartesian Psychology and Physical Minds: Individualism and the Science of the Mind (Cambridge Studies in Philosophy) By Robert Andrew Wilson

This book offers an extensive critique of individualism in psychology, a view that has been the subject of debate between philosophers such as Jerry Fodor and Tyler Burge for many years. Robert Wilson approaches individualism as an issue in the philosophy of science, and by discussing issues such as computationalism and the mind's modularity, he opens the subject up for nonphilosophers in psychology and computer science. Because the topic is so central to the philosophy of mind, an area generating enormous research and debate at present, the book has implications for a very broad range of philosophical issues.

Editorial Review

Review

"The book offers an extensive critique of individualism in psychology...The author...opens the subject up for non-philosophers in psychology and computer science. He carefully examines the most influential arguments for individualism and identifies the main metaphysical assumptions underlying them...the book has implications for a very broad range of philosophical issues..." International Journal of Psychology

"The present work is a powerful addition to the debate concerning individualism. Its value lies in its clear presentation and much-needed critical summary of recent developments in individualism." Choice

"Robert Wilson's intelligent and careful book is a smart step in the direction of anti-individualist wide psychology and a good help to clarify the terms of the debate." Augustin Vicente, Philosophy in Review
