Antipredator Defenses in Birds and Mammals (Interspecific Interactions)

By Tim Caro

In nature, the ability to defend against predators is fundamental to an animal's survival. From the giraffes that rely on their spotted coats to blend into the patchy light of their woodland habitats to the South American sea lions that pile themselves in heaps to ward off the killer whales that prey on them in the shallow surf, defense strategies in the animal kingdom are seemingly innumerable.

In *Antipredator Defenses in Birds and Mammals*, Tim Caro ambitiously synthesizes predator defenses in birds and mammals and integrates all functional and evolutionary perspectives on antipredator defenses that have developed over the last century. Structured chronologically along a hypothetical sequence of predation—Caro evokes a gazelle fawn desperate to survive a cheetah attack to illustrate the continuum of the evolution of antipredator defenses—*Antipredator Defenses in Birds and Mammals* considers the defenses that prey use to avoid detection by predators; the benefits of living in groups; morphological and behavioral defenses in individuals and groups; and, finally, flight and adaptations of last resort.

Antipredator Defenses in Birds and Mammals will be of interest to both specialists and general readers interested in ecological issues.

Editorial Review

Review

"This is a field that Caro has devoted much of his career to, and his comfort with the literature shows through. . . . *Antipredator Defenses* is a major contribution to the field and will be consulted for a long time to come. . . . Caro's book is a comprehensive survey of the field, with well articulated arguments and balanced views. I recommend it unreservedly."

(Thomas N. Sherratt, *Trends in Ecology and Evolution* 2005-04-01)

"*Antipredator Defenses in Birds and Mammals* is a comprehensive review of what we know empirically of how animals avoid predation.... [It is] full of fascinating natural history stories that make it an easy and enjoyable read."

(Will Cresswell *Ibis* 2006-07-01)

"A reviewer describes the book as 'a wonderful encyclopedic treatment of defenses against predators in mammals and birds,' but this description is incorrect insofar as it fails to mention that the book is also a great synthesis and magnificently organized. . . . A valuable information bank for any zoologist."

(Simone Teelen *Journal of Mammal Evolution*)

"In-depth reviews of nearly every aspect of prey defenses make this essential reading for researchers and students embarking on studies of prey or predator behavior. The writing is clear and any reader is bound to encounter novel and intriguing material along the way. . . . An important contribution that will help integrate and bolster theoretically and empirically driven work in this field."

(Susan Lingle *Ecology*)

"The work is technically clean and is graced with lovely and topical sketches at the head of each chapter. The treatment is quite nonmathematical and where equations are presented, they are explained quite clearly. . . . This is an important book. . . . Excellent for graduate-level seminars."

(*Auk*)

"This book is clearly and intelligently written. . . . It could be read with profit by active researchers in predation . . . by those with a more general interest in mammals and birds who are looking for a readable, reliable, and comprehensive reference in this area; and by undergraduates in courses related to ecology and animal behavior. . . . I can think of no better recommendation than the considerable number of my colleagues who have bought their own copy after having found themselves reluctant to ask me yet again to lend them mine!"

(Graeme D. Ruxton *Bioscience*)

"An encyclopedic survey that is sure to be a much consulted classic."

(*Northeastern Naturalist*)

About the Author

Tim Caro is professor in the Department of Wildlife, Fish, and Conservation Biology at the University of California, Davis. He is also the author of *Cheetahs of the Serengeti Plains: Group Living in an Asocial Species*, also published by the University of Chicago Press.

Users Review

From reader reviews:

Kim Armstrong:

The ability that you get from Antipredator Defenses in Birds and Mammals (Interspecific Interactions) will be the more deep you digging the information that hide inside words the more you get thinking about reading it. It does not mean that this book is hard to know but Antipredator Defenses in Birds and Mammals (Interspecific Interactions) giving you thrill feeling of reading. The article writer conveys their point in particular way that can be understood through anyone who read that because the author of this guide is well-known enough. This book also makes your personal vocabulary increase well. So it is easy to understand then can go along with you, both in printed or e-book style are available. We suggest you for having that Antipredator Defenses in Birds and Mammals (Interspecific Interactions) instantly.

Ross Turner:

Spent a free a chance to be fun activity to do! A lot of people spent their spare time with their family, or all their friends. Usually they carrying out activity like watching television, likely to beach, or picnic inside park. They actually doing same task every week. Do you feel it? Do you want to something different to fill your free time/ holiday? Might be reading a book may be option to fill your cost-free time/ holiday. The first thing that you'll ask may be what kinds of book that you should read. If you want to try look for book, may be the reserve untitled Antipredator Defenses in Birds and Mammals (Interspecific Interactions) can be great book to read. May be it could be best activity to you.

Bonnie Pace:

That book can make you to feel relax. This book Antipredator Defenses in Birds and Mammals (Interspecific Interactions) was colourful and of course has pictures on the website. As we know that book Antipredator Defenses in Birds and Mammals (Interspecific Interactions) has many kinds or type. Start from kids until young adults. For example Naruto or Investigator Conan you can read and believe you are the character on there. Therefore , not at all of book usually are make you bored, any it offers you feel happy, fun and relax. Try to choose the best book to suit your needs and try to like reading this.

Williams Carter:

A number of people said that they feel fed up when they reading a reserve. They are directly felt it when they get a half regions of the book. You can choose the particular book Antipredator Defenses in Birds and Mammals (Interspecific Interactions) to make your own reading is interesting. Your current skill of reading proficiency is developing when you just like reading. Try to choose basic book to make you enjoy to learn it and mingle the sensation about book and studying especially. It is to be first opinion for you to like to wide

open a book and examine it. Beside that the book Antipredator Defenses in Birds and Mammals (Interspecific Interactions) can to be your friend when you're feel alone and confuse using what must you're doing of this time.
